

Online Home Services - Project Abstract

Abstract:

In the contemporary world, individuals are burdened with hectic schedules and professional commitments, leading to minimal time for handling household issues. The concept of "Online Home Services" aims to address this challenge by providing a seamless and efficient platform that offers various services such as plumbing, electrical work, furniture repair, cleaning, painting, and more at the user's doorstep with a simple click. This system is designed to enhance user convenience through a user-friendly web and mobile interface. Users can book services, upload images for specific requirements, and receive confirmation emails, thereby ensuring efficiency and customer satisfaction. The proposed system integrates advanced technologies to manage workers, customers, and complaints effectively, enhancing the overall service experience.

Modules:

1. Admin Module:

- Login authentication.
- Manage workers and customers.
- View and respond to complaints.
- Generate service reports and analytics.
- Manage inventory and sales of raw materials for cleaning.
- Track stock levels, process user orders, and manage deliveries of cleaning products.

2. Worker Module:

- Worker registration and login.
- View assigned service bookings and schedules.
- Receive real-time notifications for new tasks.

- Update service status (e.g., accepted, on the way, completed).
- Upload work completion details and optional before/after images.
- Provide feedback or notes on tasks completed.
- View customer complaints or reviews related to services rendered.
- Access relevant material requests or instructions for cleaning services.

3. User Module:

- User registration and login.
- Browse and book various home services.
- Upload images for specific service requirements.
- Track worker status and lodge complaints.
- Purchase raw cleaning materials through the platform.
- Book home nurse services with personalized scheduling.
- Submit patient details including name, age, condition, medication, and emergency contact for accurate care planning.
- Monitor nurse visit status and provide feedback.

4. Home Nurse Module:

- Book trained home nurses for elderly or patient care.
- View nurse profiles, qualifications, and availability.
- Schedule appointments for short-term or long-term care.
- Monitor nurse activity and provide feedback.
